Ladies and Gentlemen:

Re: Notice of Inquiry  
Broadband Over Power Line (BPL)  
ET Docket No. 03-104

I am writing to indicate opposition to the above-named proposal.

My concern is not only with potential electromagnetic interference on amateur radio (ham) frequencies but on international broadcasting (worldband) frequencies as well.

The stations using these frequencies, such as the World Service of the British Broadcasting Corporation (BBC), Radio Canada International, Radio Netherlands, and many others, provide a valuable alternative news source to North American shortwave listeners.

I would not want to see any more electromagnetic interference on the frequencies used by these broadcasters than already exists.

Thank you for allowing me to express my opinion regarding this matter.

Very truly yours,

*Brian A. Rogers*
